VSR - Un-classified

1. Document information

Links to Document

Document online

Document Source

Document PDF

test repo for building openscad files into different outputs
This is still work in progress but can already build a png and stl of each scad file in the opescad directory.
See the online or pdf versions for the images as te readme is realy only the source and right now is not WYSIWYG!

2. Objects

## 2.1. Object - Axle

required a screw and didn't have one.

Figure 1. image

Listing 1. Openscad source

```
// axle for bearing for filament roller
// had no screw printed one ...
// the free end can be melted when the axle has been inserted so that no
fastener is required
$fn=360;
cylinder (h=22,d=3.5);
cylinder (h=3,d=7);
```

2.2. Object - KitchenDoorHoleStopper
Figure 2. image

Listing 2. Openscad source

```
//plug for door hinge mounting hole (WHITE)
// door replaced by sliding glass door 27/11/2021
totDepth=15;
insertDiameter=7;
lidDiameter=14;
lidHeight=1;
$fn=100;
color ([1,1,1]) {
    cylinder(h=totDepth,d=insertDiameter);
    cylinder(h=lidHeight,d2=lidDiameter,d1=lidDiameter-lidHeight);
}
```

2.3. Object - Knurl
Figure 3. image

Listing 3. Openscad source

```
diam=9;
diamOut=14.4;
holeDiam=5;
height=8.2;
$fn=100;
knurlNum=8;
knurlInc=360/knurlNum;
knurlDiam=4;
insetHeight=5;
insetDiam=5;
totalHeight=10;

module knob() {
difference(){
    union(){
        cylinder(h=height, d=diamOut);
        translate([0,0,height]){
```

```
        cylinder(h=totalHeight-height,r1=7.2,r2=5);
        }
    }
    translate([0,0,-.5])
        cylinder(h=totalHeight+1, d=holeDiam);
    translate([0,0,-.5]){
        cylinder(h=totalHeight-insetHeight+.5,d1=holeDiam+5,d2=holeDiam);
    }
    }

for(i=[0: knurlInc: 360]){
    rotate([0,0,i])
        translate([diamOut/2,0,0])
            cylinder(h=height, d=knurlDiam);
}
    }

knob();
```

2.4. Object - Library-container

Figure 4. image

Figure 6. image

Listing 6. Openscad source

```
//just a simple test drawing
$fn=100;
cube([10,10,10]);
#sphere(d=12);
```

2.7. Object - VacuumPreAmplifierBase

vacuumpreamp

housing a retro vacuum tube china preamp.

Have a nice wooden box that is looking for some use as a housing The pre-amp is a cheap vaccum tube type sourced from aliexpress https://a.aliexpress.com/_B0MVMZ

I've created an openscad model of the Box based on some measurments with a calliper. The model is designed to help asses where to drill holes and to print a guide to drill the holes. The preamp has a power input (12v~) an in and an output (headphone jack) and a Volume

VSR - Un-classified

potentiometer. Also the housing is to expose the Vacuum Tubes to the interested viewer. Since the lid is hinged and the relative position of the tubes to the lid, when opening, is difficult to eyeball the model was created to try out different Hole placments as well as providing a template for Drill guides.

2.10. Object - fastener

This is a fastener for a writing Desk.
The idea is to add a magnet to hold it up and to print it so that it does not require a bearing.

- V1 is the first prototype for a first print test and fitting test

  - fits well and axle didn't print free so need update

- V2 added a better axle but didn't get printed

- V3 added a better cutout and is printed

  - The cutout is currently a dummy pending getting the axle to work to try it out with magnets taped into place

  - axle prints freely so moving on to screw holes, magnets, and covers

- V4 Added final OCD logo and screw caps etc.

  - Mounted and working.

3. To do

Right now the github source is not perfect as the readme does not display the images when viewed in github.

Need to add further process steps for the images like meshlabserver to do furhter processing:

- glass rendering

- cleaning up the mesh

- Simplifying the mesh

- Stats

VSR - Un-classified

Need to add animation options.

☑ Need to add text display option for each item.

Need to add view parameters as options.
